PROFILE SUMMARY

Results-driven Full Stack Java Developer with 4 years of hands-on experience in designing, developing, and deploying enterprise-grade web applications in the insurance and financial services domain. Demonstrated ability to enhance application performance by 25–30% through architectural improvements and code optimization. Proficient in end-to-end software development using Java, Spring Boot, Angular, and RESTful APIs. Strong command of Agile/Scrum methodologies, CI/CD pipelines, and cross-functional team collaboration. Adept at working in fast-paced offshore-onshore delivery models, collaborating across time zones to meet project deadlines and client expectations. Passionate about building robust, scalable, and maintainable software solutions that drive real business impact.

WORK EXPERIENCE

Information Technology Analyst

NTT DATA Services | Client: The Hanover Insurance Group

July 2022 – Present

Bangalore, India

Project Overview

Project Name: Policy & Claims Management Portal – The Hanover Insurance Group

Organization: NTT DATA Services (Delivery Partner for The Hanover Insurance Group, USA)

Role: Full Stack Developer (Java / Spring Boot / Angular)

Team Size: 12–15 members across onshore (USA) and offshore (India) teams

Domain: Property & Casualty Insurance | Policy Administration | Claims Processing

The Hanover Insurance Group is one of the top 25 property and casualty insurers in the United States, offering a broad range of insurance products for businesses and individuals. As a Full Stack Developer embedded within NTT DATA's offshore delivery team, I was responsible for building and maintaining core modules of their Policy & Claims Management Portal — a mission-critical web application used by thousands of agents and underwriters across the country.

Key Responsibilities & Contributions

Backend Development (Java / Spring Boot)

- ▶ Designed and developed RESTful APIs and microservices using Java 11 and Spring Boot to support policy creation, endorsements, renewals, and cancellations.
- ▶ Implemented Spring Security for role-based access control (RBAC), ensuring secure authentication and authorization for agents, underwriters, and admin users.
- ▶ Built business logic layers using Spring MVC and service-oriented architecture (SOA) to handle complex insurance workflows including premium calculations and risk assessments.
- ▶ Developed and optimized SQL queries and stored procedures in Oracle/PostgreSQL to manage policy and claims data efficiently, reducing data retrieval time by 20%.
- ▶ Integrated third-party SOAP and REST web services for real-time data exchange with external insurance rating engines and compliance systems using Apache CXF and Spring WebClient.
- ▶ Implemented exception handling, logging (Log4j2/SLF4J), and monitoring hooks to ensure high availability and ease of debugging in production environments.

Frontend Development (Angular / HTML5 / CSS3)

- ▶ Developed dynamic, responsive single-page applications (SPAs) using Angular 12+, TypeScript, HTML5, and CSS3 for the agent-facing policy management portal.
- ▶ Built reusable Angular components, directives, and services to standardize UI patterns across the application, reducing frontend development effort by 25%.

- ▶ Integrated Angular forms (Reactive & Template-Driven) with complex validation logic to support multi-step policy application and claims filing workflows.
- ▶ Consumed backend REST APIs using Angular HttpClient with proper error handling and loading state management for a seamless user experience.
- ▶ Implemented lazy loading, route guards, and performance optimization techniques to improve Angular application load time by 30%.
- ▶ Enhanced UI/UX by redesigning key screens such as the Claims Dashboard, Policy Summary, and Endorsement Request pages, receiving positive feedback from the client team.

Testing & Quality Assurance

- ▶ Wrote comprehensive JUnit and Mockito unit test cases for service and controller layers, achieving 80%+ code coverage across critical modules.
- ▶ Performed integration testing by collaborating with QA teams to validate end-to-end workflows including policy issuance, claims submission, and endorsement processing.
- ▶ Conducted User Acceptance Testing (UAT) sessions with onshore business analysts and client stakeholders, ensuring delivered features met acceptance criteria.
- ▶ Validated API contracts using Postman and SOAP UI, creating reusable test collections for regression testing across sprint releases.
- ▶ Identified and resolved 40+ critical and high-severity defects during testing cycles, significantly improving the stability of pre-release builds.

DevOps, Deployment & Collaboration

- ▶ Maintained and versioned source code using Git and GitHub, following feature-branch workflows with pull request reviews and merge strategies.
- ▶ Participated in CI/CD pipeline executions using Jenkins, coordinating with the DevOps team for build, test, and deployment automation to staging and production environments.
- ▶ Actively participated in Agile/Scrum ceremonies including sprint planning, daily stand-ups, sprint reviews, and retrospectives across 2-week sprint cycles.
- ▶ Collaborated with business analysts, architects, and cross-functional teams across IST and EST time zones to gather requirements, clarify user stories, and deliver features on schedule.
- ▶ Assisted in the migration of legacy insurance modules from a monolithic Java EE architecture to a Spring Boot microservices-based platform, improving system modularity and deployment flexibility.
- ▶ Conducted knowledge transfer (KT) sessions for new team members and documented technical workflows, API contracts, and deployment runbooks in Confluence.

Key Achievements & Impact

- ▶ **30% Reduction in Page Load Times:** Implemented Angular lazy loading, route optimization, and API response caching strategies that significantly improved application performance.
- ▶ **25% Application Performance Improvement:** Refactored critical backend service layers and optimized database queries, resulting in measurable throughput improvements on the policy processing engine.
- ▶ **80%+ Unit Test Coverage:** Established strong testing discipline on the backend, reducing post-deployment defects by improving test coverage on service and controller layers.
- ▶ **40+ Defects Resolved Pre-Release:** Proactively identified and fixed critical bugs across frontend and backend components during integration and UAT phases.
- ▶ **Reusable Component Library:** Built a shared Angular component library used across 3 portal modules, cutting UI development time by approximately 25%.

Technologies Used

Backend: Java 11, Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Hibernate, Apache CXF

Frontend: Angular 12+, TypeScript, HTML5, CSS3, JavaScript (ES6+), Bootstrap

Database: Oracle, PostgreSQL, SQL, Stored Procedures

API & Integration: RESTful APIs, SOAP Web Services, Postman, SOAP UI, Spring WebClient

Testing: JUnit, Mockito, Integration Testing, UAT, Regression Testing

DevOps & Tools: Git, GitHub, Jenkins, Maven, Log4j2, SLF4J

Methodology: Agile / Scrum, Sprint Planning, Confluence, JIRA

TECHNICAL SKILLS

Languages: Java • TypeScript • JavaScript (ES6+) • SQL • HTML5 • CSS3

Frameworks: Spring Boot • Spring MVC • Spring Security • Spring Data JPA • Angular 12+ • Hibernate • Apache CXF

Databases: Oracle • PostgreSQL • MySQL

Testing Tools: JUnit • Mockito • Postman • SOAP UI • Regression Testing • UAT

DevOps & Tools: Git • GitHub • Jenkins • Maven • Log4j2 • JIRA • Confluence

Methodologies: Agile / Scrum • Microservices Architecture • REST API Design • SOA • CI/CD

EDUCATION

B.Tech – Computer Science & Engineering

Presidency University, Bangalore

2018 – 2022

Class XII – Andhra Pradesh State Board

2018

Class X – Andhra Pradesh State Board

2016

PROFESSIONAL DEVELOPMENT

- ▶ Completed internal NTT DATA training on Microservices Architecture and Cloud-Native Application Development.
- ▶ Participated in Spring Boot & Angular workshops organized by the delivery team to upskill on modern development frameworks.
- ▶ Regularly engaged in code reviews and technical discussions to continuously improve code quality and architectural practices.
- ▶ Actively participated in agile ceremonies, improving sprint velocity and cross-team communication practices over multiple project releases.
